Operating the induction hob

Using the touch buttons

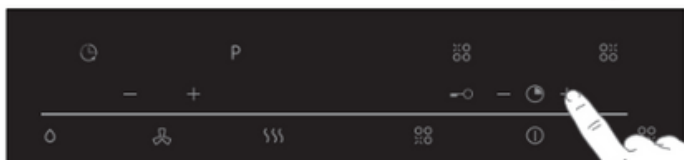

Place your fingertip flat on a touch button. There is no need to apply pressure. The touch buttons respond to a light touch with your fingertip. Operate the keys only with your finger.

1. Hold your finger on the power button for at least 2 seconds. Then all displays turn on. If you do not touch another button, the hob will switch off in a few seconds for safety reasons. The hob is in standby mode.

2. Press a cooking zone button.
 - Touch the button of the desired cooking zone.
 - The display shows 0.

3. Tap the minus (-) or plus (+) button to set the power level from 1 to P.

 **If the hob is not used for a few seconds, it will automatically switched off.**
